

Take the confusion out of LED lighting and energy efficiency. MGES can help you light up your lot and interior, and save money

MGES, or Micro Grid Energy Solutions (formerly BGS Energy), is a leading provider of state of the art LED lighting solutions and primary on-site electrical power generation.

MGES is located in Kansas City, Missouri, and approaches each dealership with a fresh set of eyes. They are not tied to one LED company's lighting, but try to look at the best solution for each dealership's unique challenges.

MGES uses Engineers to design your lot, not amateur salespeople. This ensures safety, efficiency, and longevity.

And, if you are interested in alternative electricity at a cheaper price, they can help you with that as well.

They also provide:

- Lighting engineering and installation services
- Primary on-site power generation through cogeneration

If you are looking at "**lighting up your lot**" with energy efficient lighting, or you are looking at alternative ways to save on energy costs, call Julie Sells to set up a consultation.
