

DS Systems Wash Bay Valet

Wash Bay Valet was developed to clean up messy detail and wash bays, which are typically full of broken bottles and cleaning supplies. The Wash Bay Valet houses prep and detail wands and chemicals in a neat cabinet. Hoses are run to two drops on each side of the bay, making access quick and easy for peak efficiency. No more looking for misplaced spray bottles and dispensers!

With **Wash Bay Valet**, the chemicals are dispensed via **economical bulk containers** – saving money and down time! No electricity is required for operation – only the incoming water pressure is used to mix the chemical at the required ratio, or ready-to-use pumps can be installed that require no chemical mixing with water. The standard Wash Bay Valet dispensing station distributes up to 5 vehicle prep solutions of your choice in addition to compressed air. Choose from Interior Dressing , Carpet & Upholstery Cleaner, Glass Cleaner, Pre-Soak ,and Engine Bay Cleaner. The chemical dispensing options are unlimited. Whether it's stationed in a wash bay or your dry detailing stations, the Wash Bay Valet can be customized to your application.

The **Wash Bay Valet** system is expandable to fit your company's specific wash and prep needs. Each Wash Bay Valet cabinet can support up to 5 wash bays, or 10 individual station drops. All components have been thoroughly tested for durability and reliability – ensuring long life and trouble-free usage.
